🏠 MDRF – Madaliang Renta Just For You

MDRF is a Laravel-based rental system designed to streamline the process of renting and managing properties between owners and tenants. It offers intuitive dashboards, activation-based user registration, service handling, payment tracking, and admin control — all wrapped in a user-friendly UI powered by Vite.

🚀 Features Overview

Homepage

- Leasing Button: For landowner applicants to register.

- Login / Activation:

  - Login for accessing Owner or Tenant dashboards.

  - Activation code input for newly approved users.

- Room Filter: Filter available rooms or browse all.

- Room Details Panel: View full room description and apply.

📩 Email Integration

- Email notifications (with activation codes) are sent via SMTP using Gmail.

🛠 Tech Stack

- Framework: Laravel (Latest)

- Frontend Build Tool: Vite

- Database: Laravel default (MySQL)

- Email: SMTP (Gmail)

- PDF Handling: Used for tenant payment receipts

- QR Code: Generated for owner-verified cash payments

📦 Installation Guide

1. Unzip the Project

- Extract the .zip file into your working directory.
- Open the folder in **Visual Studio Code** (or your preferred code editor).

2. Install PHP & JS Dependencies

```
composer install
npm install
```

3. Setup Environment

```
cp .env.example .env
php artisan key:generate
```

Update your .env file with:

```
DB_DATABASE=your_database
DB_USERNAME=your_username
DB_PASSWORD=your_password

MAIL_MAILER=smtp
MAIL_HOST=smtp.gmail.com
MAIL_PORT=587
MAIL_USERNAME=your_gmail@gmail.com
MAIL_PASSWORD=your_gmail_app_password
MAIL_ENCRYPTION=tls
MAIL_FROM_ADDRESS=your_gmail@gmail.com
MAIL_FROM_NAME="${APP_NAME}"
```

4. Run Migrations & Seeders

```
php artisan migrate --seed
```

5. Start Development Server

```
php artisan serve
npm run dev
```

📄 PDF Receipt Generation Setup

We use the barryvdh/laravel-dompdf package to generate and download receipts as PDFs.

Install DOMPDF

composer require barryvdh/laravel-dompdf

Usage Example

```
use Barryvdh\DomPDF\Facade\Pdf;

$pdf = Pdf::loadView('receipt-template', $data);
return $pdf->download('receipt.pdf');
```

■ QR Code Generation Setup

We use simple-qrcode for generating QR codes (used in payment confirmation).

Install Simple QrCode

composer require simplesoftwareio/simple-qrcode

Usage Example

```
use SimpleSoftwareIO\QrCode\Facades\QrCode;

{!! QrCode::size(200)->generate('Payment Verified') !!}
```

🎯 Extra Notes

- PDF Receipts: Used for tenant download history and proof of payment.

- QR Codes: Owner uses this to mark cash payments as verified.

- Activation Flow: One activation code per tenant/owner; multiple applications auto-cleaned after registration.

- Color-coded UI: For terminated tenants nearing deletion (yellow: <3 days, red: deletable).
